In the claims:

1-27. (canceled)

- 28. (new) An antibody immunologically specific for an isolated human PD2 protein, said human PD2 protein is about 531 amino acid in length and comprises an amino terminal helix-loophelix domain and a centrally localized nuclear transport signal and nucleotide binding site.
- 29. (new) The antibody of claim 28, which is a monoclonal antibody.
- 30. (new) The antibody of claim 28, which is a polyclonal antibody.
- 31. (new) A method for detecting human PD2 protein or a fragment thereof in a sample, comprising:
- a) obtaining a sample suspected of containing the human PD2 protein or the fragment thereof;
- b) contacting said sample with the antibody as claimed in claim 28, under conditions effective to allow the formation of immune complexes; and
 - c) detecting the immune complexes so formed.
- 32. (new) The method of claim 31, wherein said antibody is linked to a detectable label.
- 33. (new) The method of claim 32, wherein said detectable label is selected from the group consisting of a radioactive, a fluorescent, a biological, and an enzymatic label.

- 34. (new) A kit for detecting human PD2 protein or a fragment thereof in a sample, comprising the antibody as claimed in claim 28 and optionally instructional material.
- 35. (new) The kit of claim 33, wherein said antibody is linked to a detectable label.
- 36. (new) The kit of claim 35, wherein said detectable label is selected from the group consisting of a radioactive, a fluorescent, a biological, and an enzymatic label.
